

Hello sir, there are 5 links and screenshots of those websites I have found out user names and passwords by Havij. Those are given bellow:

- 1) http://www.uni-1.com.hk/service_en.php?id=7%27

- 2) <http://diamondhills.com.pk/pages.php?region=1%27>

3) <http://www.itopia.com.hk/eng/business.php?id=11%27>

The screenshot shows a web browser with the URL <http://www.itopia.com.hk/eng/business.php?id=11%27>. The page displays the ITopia website's business section. Overlaid on the browser is the Havij tool window, which shows the results of a SQL injection attack. The tool has successfully identified the database as 'itopia_index' and the table as 'users'. The extracted data is as follows:

usersPassword	userName
password	admin

The status bar indicates 'I'm IDLE' and the log shows the following details:

```
